Dear Odis,

I wanted to follow up with a quick question. While listening to one of Anthony Glenn's sessions, I got the idea of looking at the property I mentioned and the acreage it has to potentially establish a working farm -- citrus, vegetables, chickens, eggs, a couple of bee hives, and horses.

My question is simply this: from a tax advantage standpoint, does converting acreage to agricultural use under Pennsylvania's ACT 319 Clean & Green program make sense at the time of purchase? And would the farm classification strengthen the overall acquisition strategy?

As always, your guidance means a great deal.

Respectfully,

Anthony Crosbie
